For decision

Issue date:

2024-09-11

Deadline:

2024-10-08

SUBJECT

SMART MVP Processes

BACKGROUND

Introduction

SMART Standards will enable Members to provide new products and services to end customers, and the process of creating them will impact the standards development process in many ways. The CAs decided (54/2021 and 160/15) that the Minimum Viable Product (MVP) will be launched in January 2025, and the BTs were invited in May 2024 (see BT N15801 and BT177/DG15478/DC) to give their feedback on key draft business rules proposals that relate to the work of drafting bodies, technical bodies and production teams in order to implement the CAs' decision.

After incorporating the BTs' feedback and further progressing, the updated business rules (along with a summary of the BTs' feedback in Annex 1) and also process descriptions (Annex 2) are hereby presented for decision. Additionally, based on BTs and other stakeholders' feedback, a document describing the ISO/IEC alignment status/intentions is also included (Annex 3).

Timeline

Topic	Date	Action
Proposals feedback	2024-04-30	SMART Standards project team circulates document to BTs for feedback
	Throughout May	BT PDs consult colleagues and collect clarifying questions
	2024-05-28	SMART Standards project team presents to BTs BT PDs ask clarifying questions

	Throughout June	BT PDs consult colleagues and collect feedback
	2024-06-29	Deadline for BT PDs to submit feedback via an upcoming survey
Decision on default process exception for SMART	2024-09-10	SMART Standards project team circulates document to BTs for decision
	Throughout Sep-Oct	BT PDs consult colleagues and formulate a position
	2024-10-08	Deadline for BT PDs to vote on BT decision
	2024-10-16	SMART Standards project team presents to BTs the upcoming changes
Training	Throughout Nov	CCMC issues communications, publishes reference material and provides training for all relevant stakeholders
Operations	2025-01-01	Default process exception enters into effect Low volumes of NWIs and ENQs expected (max 20 TBs)
	Late 2025?	Formalisation; e.g. embedding into Internal Regulations instead of a default process exception
Improvements	2025 onwards	Nothing stays the same forever. Changes & improvements will be needed for things that are already known (e.g. harmonised standards, more SMART features, more integrations) and things that will only be discovered with experience.

Note: The text in strikethrough represents actions already taken.

FAQs

What is the goal of the default process exception?	Processes will be put in place, although some may be more manual than usual, considering the early stage and low volumes expected. These processes will not yet be formalised via the Internal Regulations (although they will be well documented, communicated & trained). BTs will not be consulted for each individual case and processes will be executed as defined. The exception will remain in place until the BTs decide otherwise – e.g. by formalising them in the Internal Regulations or by modifying the processes after gaining experience.
What if this default process exception is not approved?	SMART Standards are a key part of implementing CEN & CENELEC's Strategy 2030, and the Boards (CAs) have decided that such standards will be able to start being produced beginning from January 2025. The project team aims to formulate a proposal that is acceptable to all parties, but if the BTs reject it then alternative plans will need to be formulated urgently.
How and why is SMART different to OSD?	Online Standards Development (OSD) is all about large volumes, efficiencies and collaboration, while aiming to create the same type of output in the end. It is hosted on ISO/IEC servers.

	SMART, however, is all about creating a different product. Low volumes are expected for a fair while as only interested TCs/WGs will use it, probably because of demand in their industry, and accordingly, not everything will be as efficient as OSD at the beginning, even though we often oversimplify it as “like OSD but with extra features”. It is hosted on the servers of our service provider. TCs/WGs will need to choose which path to take for developing their deliverable: Word (still an option for now), OSD or SMART.
Is this aligned with ISO/IEC?	See Annex 3.

PROPOSAL(S)

BT,

- having noted
 - the CAs’ decision to enable creation of SMART standards from January 2025;
 - the proposed business rules for developing SMART Standards as presented in Annex 1 (column ‘Updated description’);
 - the proposed processes for developing SMART Standards as presented in Annex 2;
 - the ISO/IEC alignment status/intentions, shared for information, in Annex 3;
- decided to
 - approve the business rules (annex 1) and proposed processes (annex 2) as a default exception process for developing SMART Standards, to be effective as of 2025-01-01 and until further decision by the BTs;
 - invite the SMART Standards project team to provide the BTs with regular updates on improvements (e.g. incorporation into Projex-Online and Submission Interface) and operational activity (e.g. statistics, feedback).

2024-08-26 – SK

Annex 1 – MVP Business Rules – updated based on BTs’ feedback

1 Scope of the project

Proposal number	<u>Updated</u> Description	BTs’ feedback (survey results)				Comment summary	Project team response to BTs’ feedback
		Yes, fully agree	Mixed feelings	Do not agree	No opinion		
1	MVP launch & available features in January 2025 SMART standards development goes live as of January 2025. The feature that is included for this MVP is provision markup. Additional features will follow but at a later phase.	19	6	0	3	• BTs want clarity and assurance regarding alignment with ISO & IEC. • BTs fear insufficient piloting before launch. • Some want to know about future features.	• See Annex 3 – ISO & IEC alignment • Close contact will be maintained with drafting bodies with active work items in SMART → potential support needs or improvements may be identified. • Future features will depend on input from MVP users and inputs from the SMART project team based on testing, learning and observing the ISO and IEC trajectories.
2	SMART MVP scope – new and revised European homegrown deliverables Only new and revised European homegrown deliverables (i.e. ENs, TSs, CWAs and HDs) will be eligible for SMART standards development. Amendments and corrigenda deliverables will follow at a later phase.	25	1	0	2	•	
3	Vienna and Frankfurt Agreement deliverables out of MVP scope Deliverables under Vienna or Frankfurt Agreement will not be developed as SMART standards as of MVP launch.	22	3	0	3		
4	Harmonized deliverables out of MVP scope Harmonized deliverables will not be eligible for SMART standard development as of MVP launch.	23	2	0	3		

5	Default process exception for SMART deliverables CCMC, TCs, WGs and Members can operate according to defined procedures, <u>up to a maximum volume of 20 technical bodies with active SMART work items</u> , without seeking BT approval for each case, indefinitely, until the BT makes a decision that states otherwise. The Internal Regulations will not yet be modified.	19	6	0	3	• BTs fear too much commitment to stick with the processes if they are approved. • BTs fear potential large volumes and potential workload/impact from them.	• Internal Regulations will not be updated until some stability/experience is achieved. SMART processes can be updated via BT decision when and if needed. • Restrict post-MVP-launch volumes.
---	---	----	---	---	---	---	---

2 Approval of NWI

Proposal number	<u>Updated</u> Description	BTs' feedback (survey results)				Comment summary	Project team response to BTs' feedback
		Yes, fully agree	Mixed feelings	Do not agree	No opinion		
6	Voluntary nature of SMART Development of SMART deliverables will be voluntary. Word (at least for now) and OSD are other options.	22	4	1	1	• Some propose that SMART should be mandatory. • Some highlight that benefit for end customers is only achieved with large volumes.	• SMART may become mandatory at some point in the future, but it can't be immediate. As a community, we need time to learn safely with small volumes, and time to prepare/adapt/train/etc. Further, making OSD mandatory would be a natural pre-requisite.
7	Technical Body responsibility At New Work Item proposal stage, whether to develop the deliverable as SMART is decided by the technical body (usually the TC) through the new work item proposal. The NWI approval process remains unchanged.	26	1	0	1	•	•
8	Modification of NWI proposal form – SMART Digital Aspects SMART is included in the NWI form as a new "Digital Aspects" option. Although it is desirable to have the NWI delegation platform and ProjexOnline working area	21	4	0	3	•	•

	adapted to include this change, this may not be possible, and an acceptable workaround for January 2025 would be for the Technical Body Secretary to inform CCMC of a SMART NWI decision by first completing the automated form via Working Area or the NWI delegation platform and then sending an email request to production@cencenelec.eu						
9	Modification of ProjexOnline – SMART Digital Aspects Although it is desirable to have ProjexOnline adapted to be able to view whether a given work item is SMART, this may not be possible, and an acceptable workaround for January 2025 would be to have a list of SMART-developed deliverables available on a dedicated webpage maintained by CCMC.	17	4	1	6	• Some request a timeline for ProjexOnline data availability • Some request data availability in HAPIs	• A timeline for ProjexOnline data availability is not available yet; it needs to be prioritized against a long list of other requests. But it will be after Jan 2025. • HAPI data availability can be considered later too.

3 Opting in and out of SMART

Proposal number	Updated Description	BTs' feedback (survey results)				Comment summary	Project team response to BTs' feedback
		Yes, fully agree	Mixed feelings	Do not agree	No opinion		
10	Choosing SMART development after a NWI decision If a drafting body wants to develop a deliverable using SMART after the NWI decision, this can be done with minimal formality. The technical body secretary shall confirm that the • Technical body secretary • Technical body chair • Drafting body secretary • Drafting body convenor • Drafting body Professional Standardization Support	22	3	0	3	•	•

	• Work item project leader (as applicable) are all happy to proceed with switching to SMART, and then send an email to that effect to production@cencenelec.eu.						
11	<u>No opting out option available after Enquiry</u> <u>It is not permitted to switch away from SMART deliverable development after submitting for enquiry. Opting out not permitted</u> <u>Choosing to opt out of SMART for the development of a deliverable after opting in is not allowed. The only way to achieve this would be to cancel the Work Item and make a proposal for a new one.</u>	15	5	2	6	• BTs desire ability to opt out	• Agreed that opting out should be possible up until Enquiry
12	No opting in option available after Enquiry It is not permitted to switch to SMART deliverable development after submitting for enquiry.	19	4	0	5	• Some desire ability to opt in after enquiry	• Opting in after enquiry would not be feasible because it would mean that the SMART elements would not have been considered as part of this important quality control process.

4 Drafting and editing processes

Proposal number	<u>Updated</u> Description	BTs' feedback (survey results)				Comment summary	Project team response to BTs' feedback
		Yes, fully agree	Mixed feelings	Do not agree	No opinion		
13	Evolution of roles at Member level to include SMART standards The following roles, which are currently responsible for ensuring quality of deliverables, will also need to ensure quality of the SMART elements of them, e.g. checking that the tag "Requirement" matches the text "shall": • Professional Standardization Support for WG • Secretary of a drafting body	19	5	2	2	• BTs are skeptical that individuals can/will take on additional responsibilities, especially given the struggle with existing responsibilities • BTs desire clearer role descriptions • BTs suggest a new digitalisation officer role in TCs/WGs, per proposal	• We expect the same challenges as for today's existing responsibilities: individuals may be time-challenged • A digitalisation officer role could be considered later, but for MVP launch is premature • Only interested TCs/WGs will participate at MVP stage; it's likely that involved people will have interest and time available • Responsibilities will be emphasised

	• Secretary of a Technical body • Convenor of a Working Group					• at International level • Some proposed that tagging be done centrally.	• as part of training sessions/materials • There may be a misunderstanding of primary vs secondary content (ISO/IEC terms: SMART from the start vs unverified/verified content). The project team will cover this again in the presentation to BTs.
14	CCMC-provided training and documentation Appropriate webinars and written documentation will be provided by CCMC and will be consulted by all parties that plan to take part in the development of a SMART deliverable before the MVP launch. As of MVP launch, CCMC will provide continuous live support to members on SMART deliverables development. Regular promotional webinars will take place to ensure promotion and guidance towards the development of new SMART deliverables. Necessary external communication channels will be updated accordingly.	28	0	0	0	• Some requested a helpdesk • Some requested lessons learned to be made available	• The existing email addresses production@cencenelec.eu and itsupport@cencenelec.eu will be available for support. • BTs will receive updates regarding SMART periodically.
15	Submission from Members to CCMC As of MVP launch, Technical Bodies and Technical Committees will inform CCMC that a SMART deliverable is ready for submission to Enquiry by sending an email to production@cencenelec.eu. Submission via the Submission Interface will be enabled in a later phase.	22	2	0	4	• Some requested integration into Submission Interface rather than email	• Submission interface is indeed desired, but given that resources are not unlimited, prioritization is required. This will come in due course, and priority will increase as volumes do.
16	Manual CCMC editing The CCMC editing process will happen manually as at MVP launch. This means that we accept that there is no automated tool available for CCMC editors and there is a slightly increased possibility of human error. Automated tools to support CCMC editing will follow	19	4	1	4	• BTs are concerned about low quality.	• CCMC will manually ensure a minimum level of quality as of MVP launch. Automated tools will follow later.

	at a later phase.						
--	-------------------	--	--	--	--	--	--

5 Translations of SMART deliverables

Proposal number	<u>Updated</u> Description	BTs' feedback (survey results)				Comment summary	Project team response to BTs' feedback
		Yes, fully agree	Mixed feelings	Do not agree	No opinion		
17	Distribution of traditional translations only As of MVP launch, CCMC will not distribute translation of the SMART version of the deliverable in any file format. The SMART versions of the deliverable in XML and PDF are made available in English only. The French and German translation are provided only for the traditional version of the standard in Word and PDF. At the moment there are no changes in the translation process and we do not require as of January 2025 for AFNOR, DIN & DKE to have solutions ready to be able to provide a translated version of the SMART deliverables. The translation process for SMART deliverables will follow at a later phase.	17	3	1	7	- Some request translations from CCMC into the 3 official languages. - Some have questions about creating translations in their own local language.	- The 3 official languages will be provided but only in the traditional files, not the SMART files, for each deliverable developed using the SMART authoring tool. This will likely change in the future, but no timeline can yet be provided. - Members may translate SMART files into their own language if desired, but this is only relevant for Members who wish to provide translated SMART-based products and services to their end customers. Other Members can still make translations in the usual way based on the traditional files. An XML-based translation tool would be the recommended way to translate SMART files, not PDF; but CEN-CENELEC do not yet have plans to provide one.

6 Enquiry

Proposal number	<u>Updated</u> Description	BTs' feedback (survey results)				Comment summary	Project team response to BTs' feedback
		Yes, fully agree	Mixed feelings	Do not agree	No opinion		
18	CCMC distribution formats for SMART deliverables during Enquiry	26	0	1	1	Some request metadata/content	HAPIs will <u>not</u> contain metadata for whether a deliverable is developed

	As of MVP launch, CCMC will distribute two versions of the XML and PDF files (traditional and SMART) and only the traditional version for the Word file- These formats are made available by CCMC to all CEN/CENELEC Members during Enquiry and Formal Vote (proposal 25) and Publication (proposal 29). <table><tr><th colspan="5">Files CCMC provides to Members</th></tr><tr><th colspan="2"></th><th>Enquiry</th><th>Formal Vote</th><th>Publication</th></tr><tr><td rowspan="3">Traditional</td><td>Word</td><td>eTrans & Ballot/Vote</td><td>eTrans & Ballot/Vote</td><td>eTrans only</td></tr><tr><td>PDF</td><td>eTrans & Ballot/Vote</td><td>eTrans & Ballot/Vote</td><td>eTrans only</td></tr><tr><td>XML</td><td>eTrans only</td><td>eTrans only</td><td>eTrans only</td></tr><tr><td rowspan="3">SMART</td><td>Word</td><td></td><td></td><td></td></tr><tr><td>PDF</td><td>eTrans & Ballot/Vote</td><td>eTrans & Ballot/Vote</td><td></td></tr><tr><td>XML</td><td>eTrans only</td><td>eTrans only</td><td>eTrans only</td></tr></table>	Files CCMC provides to Members							Enquiry	Formal Vote	Publication	Traditional	Word	eTrans & Ballot/Vote	eTrans & Ballot/Vote	eTrans only	PDF	eTrans & Ballot/Vote	eTrans & Ballot/Vote	eTrans only	XML	eTrans only	eTrans only	eTrans only	SMART	Word				PDF	eTrans & Ballot/Vote	eTrans & Ballot/Vote		XML	eTrans only	eTrans only	eTrans only					availability via HAPIs Some request a SMART Word file for Enquiry.	using SMART or not at this stage. - HAPIs <u>will</u> contain filename metadata and the files themselves. As per current practice, the filename metadata is handled different for CEN (only the name of the zip file, not each individual file) versus CENELEC (the name of each individual file). - A SMART Word file is not in scope at this stage. It would require effort to build, it is unclear whether/how Members would find it useful, and the future usage of Word in general (not only for SMART) is also uncertain at this stage. It may be revisited later. - Corrected an error (Publication stage has different files).
Files CCMC provides to Members																																											
		Enquiry	Formal Vote	Publication																																							
Traditional	Word	eTrans & Ballot/Vote	eTrans & Ballot/Vote	eTrans only																																							
	PDF	eTrans & Ballot/Vote	eTrans & Ballot/Vote	eTrans only																																							
	XML	eTrans only	eTrans only	eTrans only																																							
SMART	Word																																										
	PDF	eTrans & Ballot/Vote	eTrans & Ballot/Vote																																								
	XML	eTrans only	eTrans only	eTrans only																																							
19	No change on the voting process As of MVP launch, when voting during the Enquiry and Formal Vote phases, the traditional voting process remains unchanged. However members vote on both the SMART and the traditional versions of the deliverable – meaning that: - The voting options and logic remain unchanged as Members cannot provide different votes on the traditional and SMART version of the deliverable - The SMART deliverable and traditional deliverable cannot be distinguished during the voting process - The ballot contains the additional SMART PDF in addition to the traditional PDF	23	5	0	0	Some have questions about whether Members were expected to vote on both the traditional and SMART version.	Only one vote is required. The Member needs to look at either the SMART file, or the traditional file, or both, according to their preferences, in order to decide how they wish to vote.																																				
20	SMART comments are technical comments As of MVP launch, all comments	20	4	2	2	BTs want to know why SMART comments can't be General or Editorial.	Given the current features, the only comments possible on SMART elements are either a provision tag																																				

	concerning SMART elements are considered technical and stated as so in the commenting form. The commenting template remains unchanged.					Some suggest removing General and Editorial options from the commenting template.	should be added/removed, or there is a mismatch between verbal form/tag. In any of these cases, any resulting change effectively results in a different understanding of what a standards user needs to do to conform. E.g. if the text “is to” was originally tagged as “recommendation” and now changes to “requirement”, the TC/WG members probably had different interpretations and therefore need to rediscuss; this is a technical change and therefore it should not be possible to skip formal vote. - As per today, comment categorization may be erroneous and is difficult to enforce, anyway. - General and Technical remain options in the commenting template because comments on the traditional comment remain possible, too.												
21	Circulation of SMART deliverables from Members to the public Even though CCMC provides both the SMART and traditional deliverables, Members are under no obligation recommended not to circulate the SMART version of the deliverable during public Enquiry. The traditional version is sufficient. <table><tr><th colspan="3">Versions Members provide during Enquiry</th></tr><tr><th></th><th>To the public</th><th>To Mirror Committees</th></tr><tr><td>Traditional</td><td>required</td><td>optional</td></tr><tr><td>SMART</td><td>recommended not to</td><td>required</td></tr></table>	Versions Members provide during Enquiry				To the public	To Mirror Committees	Traditional	required	optional	SMART	recommended not to	required	26	1	1	0	BTs believe that the SMART PDF must not be made available to the public during Enquiry due to IPR risk associated with regulatory demand for free access.	Agreed.
Versions Members provide during Enquiry																			
	To the public	To Mirror Committees																	
Traditional	required	optional																	
SMART	recommended not to	required																	
22	Circulation of SMART deliverables from Members to mirror committees	22	1	4	1	Some fear that circulating the SMART version to	It is essential for quality purposes that comments are solicited on the												

	Members have a mandatory obligation to provide both the SMART PDF and the traditional version of the deliverable to the mirror committee, if it exists, during the Enquiry phase. <u>It is optional to also circulate the traditional file to the mirror committee, but if this is done, duplicate comments are not desired.</u> <table><tr><th colspan="3">Versions Members provide during Enquiry</th></tr><tr><td></td><td>To the public</td><td>To Mirror Committees</td></tr><tr><td>Traditional</td><td>required</td><td>optional</td></tr><tr><td>SMART</td><td>recommended not to</td><td>required</td></tr></table>	Versions Members provide during Enquiry				To the public	To Mirror Committees	Traditional	required	optional	SMART	recommended not to	required					mirror committees may not be feasible for all Members. • Some fear that circulating two documents could result in duplicate comments.	SMART elements. But we imagine that some mirror committee members will prefer to comment on the traditional PDF. Therefore we will make the SMART PDF mandatory and the traditional file optional, according to the preferences of the Member and/or mirror committee members. • Training materials will include specific guidance for mirror committees: please do not make duplicate comments.
Versions Members provide during Enquiry																			
	To the public	To Mirror Committees																	
Traditional	required	optional																	
SMART	recommended not to	required																	
23	Comment resolution on SMART elements Comments on SMART need to be discussed and resolved during the resolution meetings, just like other comments.	25	1	1	1	•	•												
24	Enquiry allowed as of January 2025. The Enquiry process is allowed for SMART deliverable as of January 2025	20	2	2	4	•	•												

7 Formal vote

SMART	Word																																										
	PDF	eTrans & Ballot/Vote	eTrans & Ballot/Vote																																								
	XML	eTrans only	eTrans only	eTrans only																																							
30	No obligation for Members to publish SMART version Even though the SMART project will encourage members to provide SMART-based services, there is no obligation for Members to publish the SMART version of a standard or offer SMART-based products or services to the public. Making the traditional standard available is sufficient.	26	0	1	1	•	•																																				

Annex 2 – MVP Processes

1 High level process: SMART way of working

While the drafting method will be revised with the introduction of SMART working, the overall process will remain the same. The high-level process below outlines potential changes to the process.

2 Tabular form

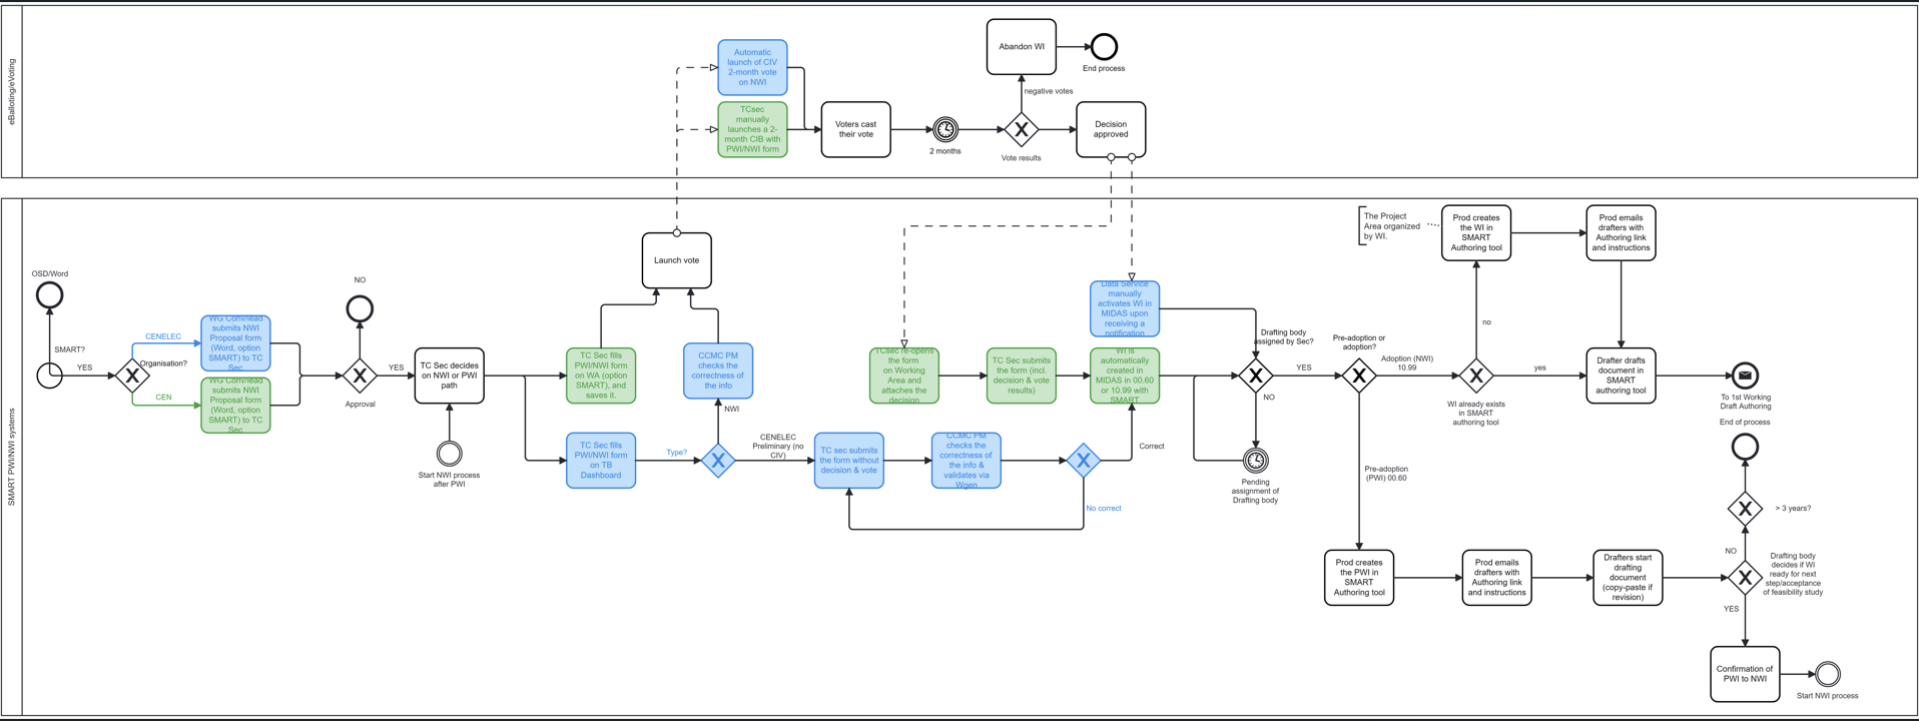

General principles: We will only modify the process where necessary, without changing the underlying rules. Additionally, we will align with OSD wherever possible, leveraging OSD's developments to support the SMART project.

Process step	Change to TC/WG actions	Changes to CEN-CENELEC Members' actions	Changes to CCMC actions
New Work Item Proposal	Mark 'SMART' on the NWI Proposal template		- Validate SMART NWI Proposal. - Notify TC Secretary of acceptance or rejection.
WI activation			- Manually create the document in Authoring tool when a SMART WI reaches stage 00.60. If stage 00.60 is skipped, manually create the document upon reaching stage 10.99. - Provide the drafters with the SMART Authoring link and instructions.
Drafting of prEN (document creation, 1 st draft circulation)	Draft the document in the SMART Authoring tool.		
Submission, editing and translating	Notify CCMC via email that the draft is ready for submission.		- Download the files from SMART Authoring tool, compress them into a zip file, and upload the zip to eTrans. The zip should include: - Word document - PDFs (Traditional + SMART) - XML files (Traditional + SMART)
Enquiry Ballot		For CENELEC only: Due to technical limitations with eVoting, Permanent	CENELEC: Upload the SMART files to the FTP server and notify the Permanent

		Delegates retrieve the SMART documents from the FTP server and share them with their respective production departments to enable viewing of comments and votes on the SMART files. All: • Vote on the SMART PDF during the ballot/vote process.	Delegates. CEN: • Ensure all files (SMART PDF, Traditional PDF and Traditional Word) are available on the ballot. <u>Note:</u> The circulation of the results for both CEN and CENELEC remains unchanged.
Resolutions and integration of comments	If technical changes: • Resolve comments in the WORD template and incorporate them in the WI in the SMART Authoring tool.		• Make the SMART WI available to the Drafters, to incorporate the comments. • If skipping Formal Vote, make the WI available to the Editors.

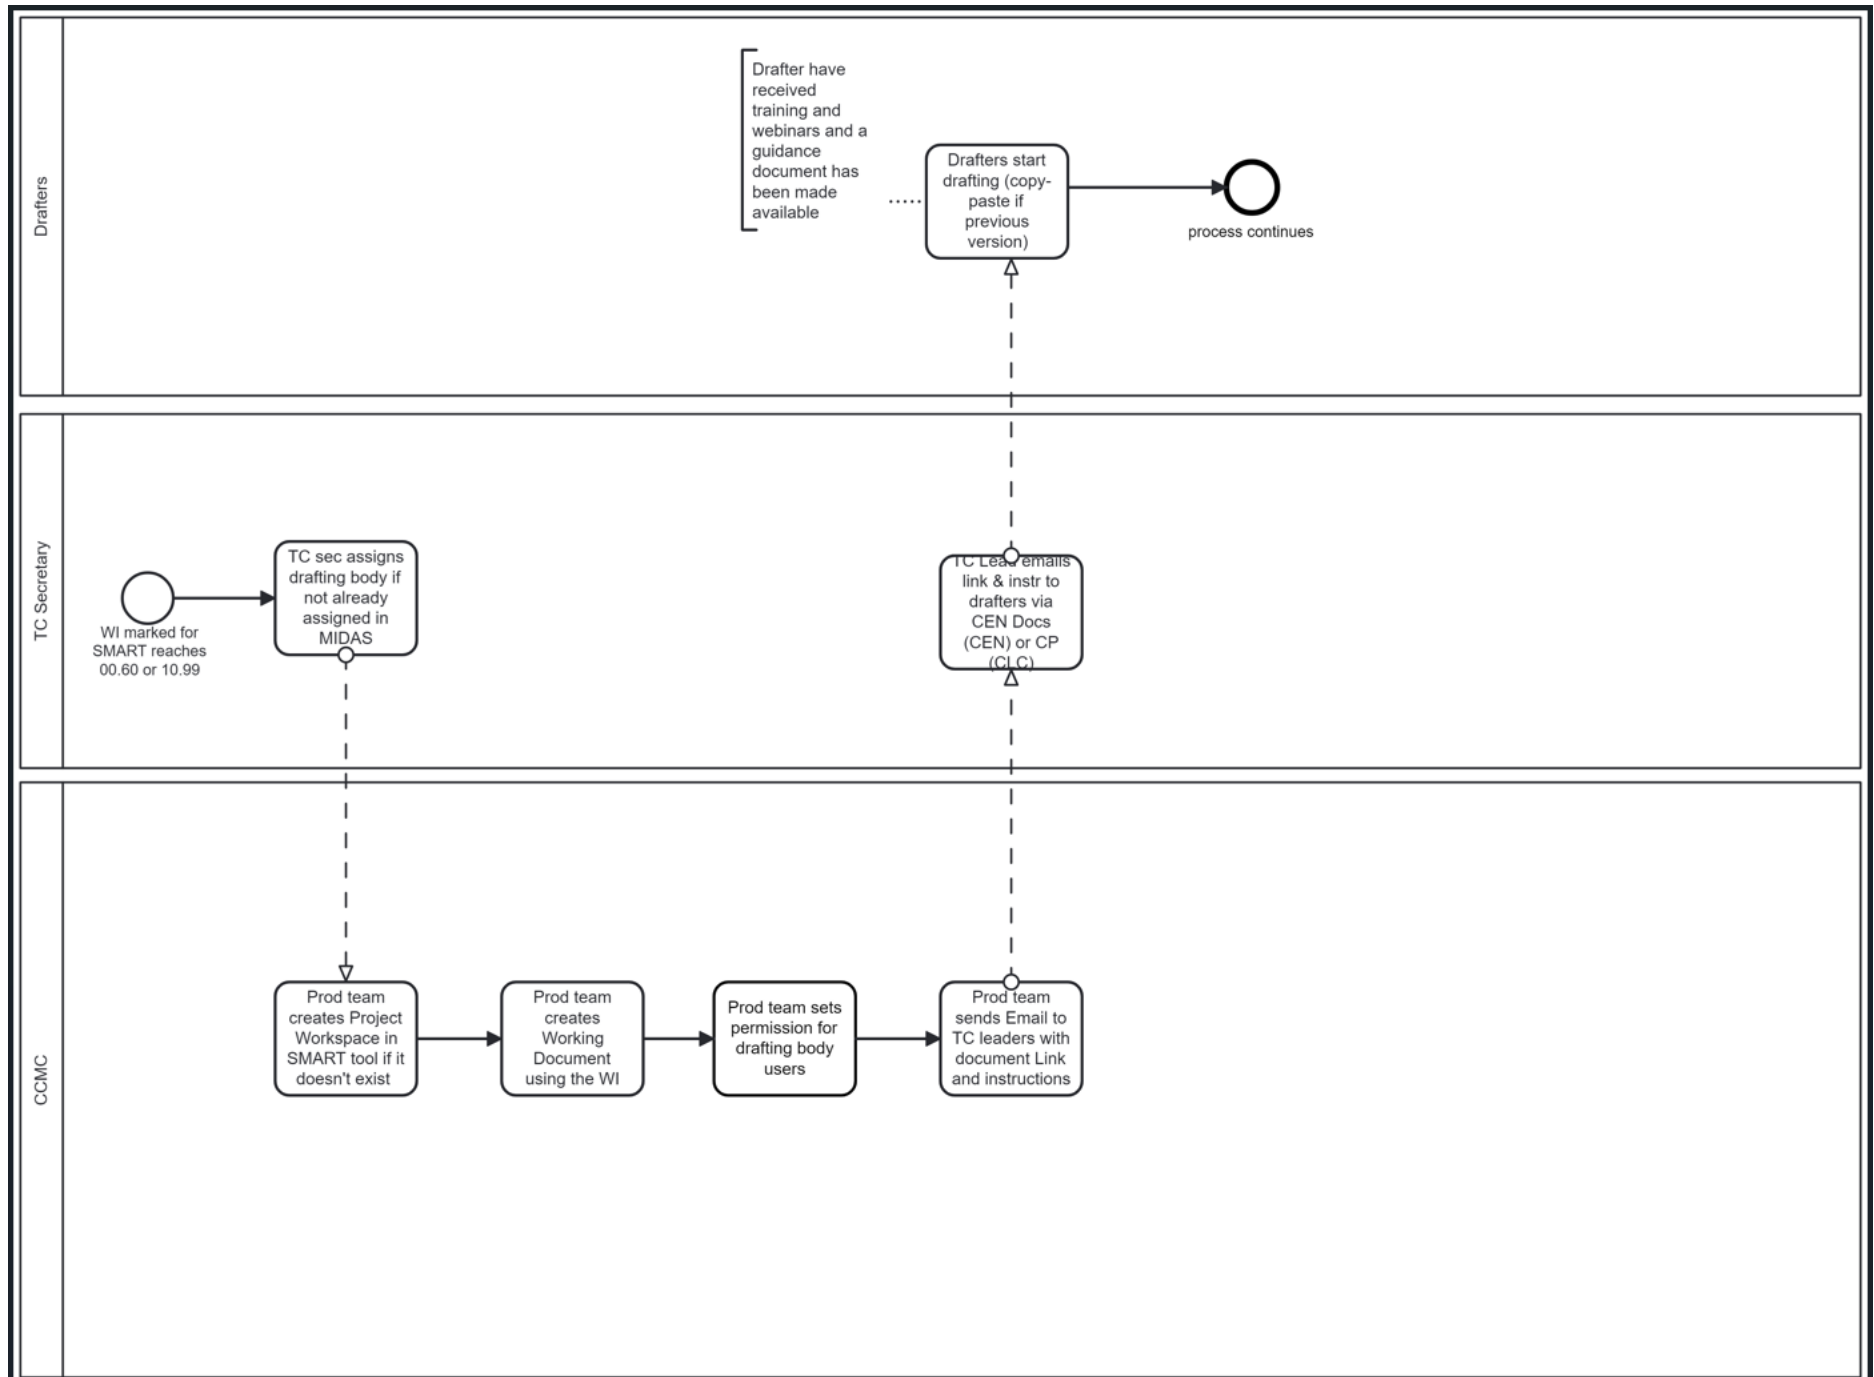

3 Flowchart form

Annex 3 – ISO & IEC alignment

Many European stakeholders have requested more clarity around the status and intentions regarding alignment between CEN-CENELEC and ISO-IEC on SMART. This document attempts to explain. Note that the situation is evolving rapidly; this information is correct as at 2024-09-09.

The need

End users need to use standards content from different sources (including ISO, IEC, CEN and CENELEC) and therefore need consistency in the type of content that is created and supplied to them; otherwise, they are likely to go to a third-party aggregator who will meet their needs.

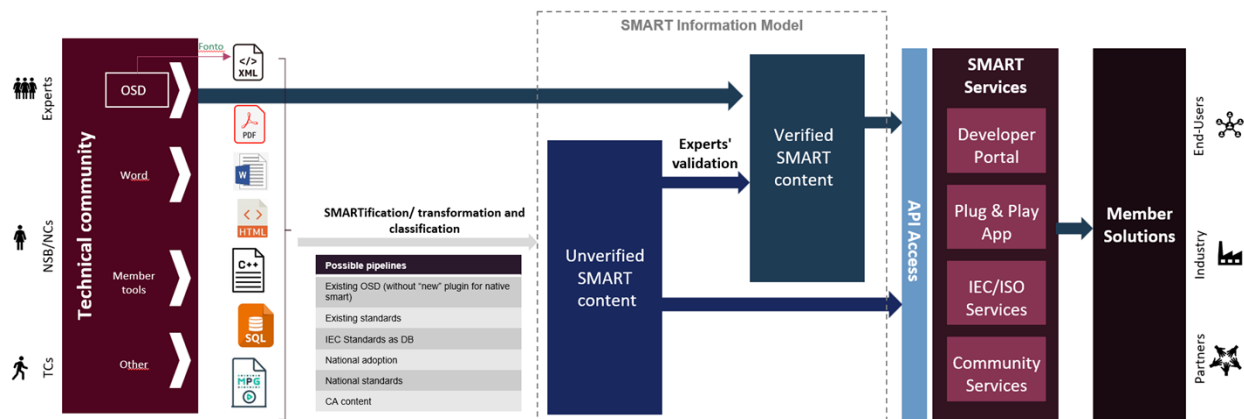

Similarly, Members need to process standards content from different sources (including ISO, IEC, CEN and CENELEC), and for reasons of process efficiency as well as ability to meet end customer needs, they also desire consistency in the content they receive from ISO, IEC, CEN and CENELEC.

As no SMART solutions are yet in place/live, and multiple different SMART initiatives are currently underway, consistency/alignment is an important open topic.

What we're doing

Similar

- **Creator/creation time:** All 4 organisations understand the same basic concepts in terms of who creates SMART content and when. We use different terminology: Europe usually talks about primary vs secondary content; International talks about “SMART from the start” vs verified/unverified content, but the underlying concept is the same.

- **Value:** All 4 organisations agree that all of these ways of developing SMART content are valuable. Each way has its advantages.
- **Architectural principles:** CEN & CENELEC's approach does not conflict with the current versions of ISO's SAF (SMART Addressing Framework) and IEC's SIM (Standards Information Model). (Although there is still work ongoing in this area and it will need to be re-evaluated soon.)
- **IPR risk management:** All 4 organisations agree that a split-file approach, whereby the SMART elements are separated from the traditional elements of the standard, is important

to reduce the intellectual property rights risk associated with regulatory demand for free access.

- **Common team members:** A large number of the SMART team members at International are also team members in Europe.

Different

- **Creator:** Europe is working only on primary content (SMART from the start) whereas international has mostly been working on secondary content (initially unverified which could be validated to become verified) and has only recently started working on primary content (SMART from the start).
- **Tagging extent:** Europe is focusing only on a couple of basic tags (provision markup) for its first launch (which will later expand), whereas International is focused on launching secondary content with a much more ambitious tag set (e.g. list and table structures...).
- **Tag names:** Europe and international have slightly different tag names in the IT language (XML) but that doesn't pose a conceptual problem – i.e. if an IT schema change is made while the standard is still in the drafting phase, it should be easy to convert it
- **Timeline:** Europe is working to a Jan 2025 launch date driven by customer demand, whereas International deadlines are still being defined
- **Agility:** Europe is taking a phased approach, launching an initial Minimum Viable Product for small-scale real-world operations which will evolve with additional iterations provided for further real-world use (more agile/iterative). International is developing its ideas in a test-world, with no fixed dates yet for a real-world launch.
- **Rules & processes:** Europe has already drafted procedures to embed creation of SMART content into the operations of technical bodies, Members, etc, whereas International have not opened this topic yet.

Vision for future alignment

- **Conversion:** In case a document begins being drafted in one way (e.g. CEN-CENELEC SMART) and then the tools are changed (e.g. ISO-IEC SMART and/or a release of an ISO-IEC SMART Information Model), migration would be easy, assuming it is still in the drafting phase and volumes are small. Worst case, this could be done by a human doing copy-paste, taking only a few hours per document.
- **Incorporation into OSD:** Europe has always hoped its SMART features would be incorporated into ISO/IEC OSD so we would have a single solution in the end, but so far ISO/IEC have not directly responded/committed to offers/proposals. However, ISO recently shared a draft set of SMART features it would like to incorporate into OSD, yet it doesn't have the budget to deliver them whereas we do (due to EC/EFTA funding), so openness to direct collaboration is starting to seem more likely than it did previously. There are a variety of possible modalities in terms of tools and contracts.
- **Leveraging ISO-IEC tools:** CEN-CENELEC could ask at any time whether ISO/IEC would run their secondary content tool (unverified/verified content) on the CEN-CENELEC back-catalogue. But running it had best wait until after ISO-IEC's tools and rules/processes are mature.

Why we're doing it

Advantages of our approach

- **International influence:** We believe Europe has already succeeded in influencing International. For example, International was previously focused solely on secondary content (unverified/verified content) and it's only in the last ~12 months that they've spent significant effort on primary content ("SMART from the start"). This might have started significantly later without European influence.
- **Customer satisfaction:** End customers (standards users) are tired of slides; they need evidence that we're making progress: real results for real standards, even if we start at small scale. We can't wait or get stuck in analysis paralysis.
- **Flexibility:** A common data model would enable different parties to progress at different speeds.
- **Experience:** All stakeholders (experts, production teams, secretaries...) are gaining practical experience & learning new concepts. The learning curve will be long, and the sooner we get started, the sooner we'll become high performers.

Risks of our approach

- **Instability:** The agile approach with phased iterations could lead to instability. Mitigations:
 - **Consultation:** Stakeholders will be consulted for feedback/approval as relevant (similar to the recent BT survey with a set of draft proposals for SMART)
 - **Intuitive design:** The drafting interface will be well designed for experts so changes are as low-impact and intuitive as possible.
 - **Abstraction/insulation:** The drafting interface can often remain unchanged even though changes happen in the backend systems and data models.
 - **Versioning:** The biggest impact of future iterations will be for those Members who are processing SMART XML (their IT or product development teams). For their benefit, we will need a good versioning approach. (Or if ISO/IEC go live before we publish any SMART standards, we might defer to ISO/IEC's schema anyway.)
 - **Quality assurance:** Tools and/or processes to ensure consistency beyond simply schema conformity.

How did we decide to take this approach?

- **Proposed by NSBs/NCs:** This basic approach (European iteration, offer to ISO/IEC) was proposed by NSBs/NCs who were participating in the SMART Standards project and documented in the form of a Project Charter.
- **Approved by CAs:** The Project Charter was discussed by DITSAG who recommended that the CAs approve it. The CAs approved it in 2021 (54/2021 and 160/15).
